he tube from sliding horizontally too far one way or the other.
The brush was then lowered slightly until it touched the inside surface of the tube. The tube was rotated manually 360 degrees until a single coating of the ather thick silver paste was applied. The width of the swath was approximately 0 mm.
the Soviets intended to operate this with an electric motor for production purcoses but I don't know if they did.
dished the necessary designs approximately in late 1947. The machine itself completed soon thereafter
